This book can be purchased at <http://www.bartlettpublishing.com/>

This book is not a reference book, it is an introductory book. It is therefore not suitable by itself to learn how to professionally program in x86 assembly language, as some details have been left out to make the learning process smoother. The point of the book is to help the student understand how assembly language and computer programming works, not to be a reference to the subject. Reference information about a particular processor can be obtained by contacting the company which makes it.

To receive a copy of this book in electronic form, please visit the website

<http://savannah.nongnu.org/projects/pgubook/> This site contains the instructions for downloading a transparent copy of this book as defined by the GNU Free Documentation License.

Table of Contents

1. Introduction.....	1
Welcome to Programming	1
Your Tools.....	3
2. Computer Architecture	7
Structure of Computer Memory.....	7
The CPU.....	9
Some Terms	11
Interpreting Memory	13
Data Accessing Methods.....	14
Review	16
3. Your First Programs	19
Entering in the Program	19
Outline of an Assembly Language Program.....	22
Planning the Program.....	28
Finding a Maximum Value.....	31
Addressing Modes	41
Review	45
4. All About Functions.....	49
Dealing with Complexity	49
How Functions Work	50
Assembly-Language Functions using the C Calling Convention	52
A Function Example	59
Recursive Functions.....	64
Review	71
5. Dealing with Files.....	75
The UNIX File Concept.....	75
Buffers and .bss	76
Standard and Special Files.....	78
Using Files in a Program.....	79

Review	93
6. Reading and Writing Simple Records	95
Writing Records	100
Reading Records	104
Modifying the Records	111
Review	114
7. Developing Robust Programs.....	117
Where Does the Time Go?.....	117
Some Tips for Developing Robust Programs.....	118
Handling Errors Effectively	121
Making Our Program More Robust	123
Review	126
8. Sharing Functions with Code Libraries.....	129
Using a Shared Library	130
How Shared Libraries Work	133
Finding Information about Libraries.....	134
Useful Functions	140
Building a Shared Library.....	141
Review	143
9. Intermediate Memory Topics.....	147
How a Computer Views Memory	147
The Memory Layout of a Linux Program.....	149
Every Memory Address is a Lie	151
Getting More Memory	155
A Simple Memory Manager	157
Using our Allocator.....	174
More Information.....	177
Review	178

10. Counting Like a Computer	181
Counting.....	181
Truth, Falsehood, and Binary Numbers	186
The Program Status Register	195
Other Numbering Systems.....	196
Octal and Hexadecimal Numbers	199
Order of Bytes in a Word	201
Converting Numbers for Display	204
Review	210
11. High-Level Languages	213
Compiled and Interpreted Languages	213
Your First C Program	215
Perl	218
Python	219
Review	220
12. Optimization.....	223
When to Optimize	223
Where to Optimize.....	224
Local Optimizations.....	225
Global Optimization.....	229
Review	230
13. Moving On from Here	233
From the Bottom Up	234
From the Top Down	234
From the Middle Out	235
Specialized Topics	236
Further Resources on Assembly Language.....	237

A. GUI Programming	239
B. Common x86 Instructions	257
C. Important System Calls	271
D. Table of ASCII Codes	275
E. C Idioms in Assembly Language	277
F. Using the GDB Debugger	289
G. Document History	299
H. GNU Free Documentation License	301
I. Personal Dedication	311
Index	313
